

Don't throw those instructions away ! File them in Section 6 of your *Industrial Electrician's Notebook*.

Section 6 of the *Industrial Electrician's Notebook* has been reserved for filing Manufacturers' Data Sheets. Next time you open a box containing an electrical component, save the literature by inserting it in your own copy of the *Electrician's Notebook*. There is a wealth of information on those little, folded-up sheets supplied with every electrical component. So, whether it be a push button, contact block, relay, lighting ballast, control transformer, fuse link, overload heater, or other small component, read the information and then save it for future reference. Inclusion of the data sheet in your notebook will, during the course of your electrical career, result in the compilation of valuable reference library; you'll be surprised how little time it takes and how often you will refer to it.

Save those manufacturers' data sheets.

To begin your collection of data sheets, use your browser back button to return to the Electrician's Notebook Page and click the Typical Data Sheet link to download a two-page data sheet on auxiliary contacts provided by General Electric.
